

Piling Products, Inc.

Pile Points

A) Standard "H" BEARING PILE POINTS

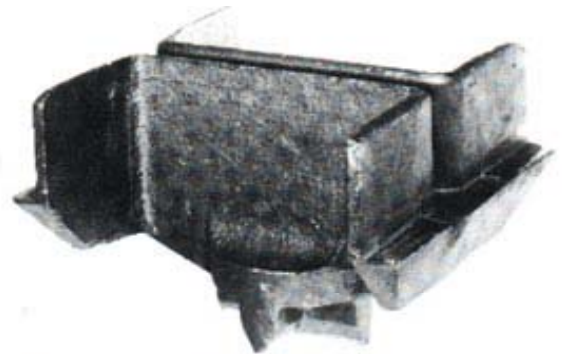

— STANDARD —

Used to drive through glacial till - protects the flanges & web of the bearing pile from damage due to boulders etc.

B) ROCK INJECTOR "H" BEARING PILE POINTS

This is recommended where the rock bed is dipping at 12 degrees or more. The chisel-like point will chip the rock and prevent sliding off-line.

FOR SPECIAL STEEP DIPPING ROCK
— ROCK INJECTOR DESIGN —
